Enunciat de la Història					Criteris d'acceptació			
User Story ID	Rol	Característica / Funcionalitat	Raó / Resultat	Nombre (#) d'Escenari	Criteri d'acceptació (Títol)	Context (Given)	Esdeveniment (When)	Comportament esperat (Then)
US001	As a customer, I want to reserve a place in a queue remotely so that I don't have to wait physically.	Reserve a place in the queue via the app	To avoid waiting physically	1	The customer can join a queue remotely.	Given a customer viewing a shop queue.	When the customer presses the "Join queue" button.	Then the system assigns a queue position and shows a confirmation message.
US002	As a customer, I want to be able to cancel my queue booking if I decide to not buy in that shop.	Cancel a place in the queue via the app	To avoid making workers wait	1	A confirmation is needed to cancel a reserved place.	Given a customer with an active queue booking.	When the customer presses the "Cancel booking" button.	Then the system shows a page, where the customer need to press a button of confirmation.
				2	Cancelation is successful	Given a customer with an active queue booking.	When the customer presses the "Cancel booking" button, and confirms its decision.	Then the system shows the list of actives queues, without the canceled queue.
US003	As a customer, I want to see my position in the queues I'm in, to manage correctly my time and route.	View queue position	To manage efficiently time and route	1	Queue position is loaded	In case the user is registered in a queue	When the customer presses the concrete queue button, to access its information.	The system will display the user's current position in the queue
				2	Multiple queues are displayed	In case the user is registered in multiple queues	When the customer presses the "Actives queue" button.	The system will display all queues with their positions and estimated time
US004	As a customer, I want to receive confirmation to know I've successfully joined a queue.	Receive a confirmation message after joining a queue	To be sure that the reservation has been completed successfully	1	A confirmation message is shown after joining the queue	Given the user has selected a shop with an active queue	When the user presses the "Join queue" button and the reservation is completed successfully	Then the system displays a confirmation message indicating that the user has successfully joined the queue
				2	The confirmation includes the user's queue information	Given the user has successfully joined the queue	When the confirmation message is shown	Then the system displays the assigned queue position and the selected shop information
US005	As a customer, I want to see the estimated waiting time on my queues to not waste time.	View the estimated waiting time of the queue	To better organize my time and know how long I will probably have to wait	1	The estimated waiting time is displayed to the user	Given the user has joined an active queue	When the user opens the queue information or tracking screen	Then the system displays the estimated waiting time for that queue
				2	The estimated waiting time is updated when the queue changes	Given the user is viewing an active queue and the estimated waiting time is already displayed	When the queue advances or its status changes	Then the system updates the estimated waiting time automatically
US006	As a user, I want to see a map with all shops and their queues so that I can choose where to go.	Real-time map with shop queues.	To choose where to go	1	The map shows all available shops.	Given a user opens the map section.	When the map finishes loading.	Then the system displays all available shops on the map.
				2	The system informs when the map cannot load.	Given the map service is unavailable.	When the user opens the map section.	Then the system shows an error message indicating that the map could not be loaded.

US007	As a customer, I want to see the update on my queues in real time.	Real-time queue updates	To manage time efficiently and react to changes	1	Queue updates are displayed in real time	In case the user is registered in a queue	When the customer presses the concrete queue button, to access its information.	The system will update and display the user's queue position automatically in real time
				2	Update triggered by queue changes	In case another user advances or leaves the queue	When the customer presses the concrete queue button, to access its information.	The system will instantly reflect the new position without requiring user interaction
US008	As a customer, I want to receive notifications when my turn is near so that I can arrive on time.	Receive turn notification	To know when it is time to go to the shop without waiting a line	1	The notifications are turned on and received when is the clients turn	In case the user is registered in a queue	The user's turn is ready	The system will send a notification to inform the user that it is their turn
				2	Notification before the clients turn	In case the user is close to their turn	The queue reaches the previous positions, and it's closed to users' turns	The system will send an alert advising the user to approach the shop
US009	As a user with low technical skills, I want a simple interface so that I can use the app easily.	Simple interface	So that the use of the app is easy	1	The main actions are clearly visible	Given a user with low technical skills opens the app	When the home screen is displayed	Then the system shows the main actions with clear labels and simple navigation.
				2	The user can complete a basic action without confusion	Given a user with low technical skills is on the app	When the user wants to join a queue	Then the system guides the user with clear steps and understandable messages
US010	As a user, I want clear feedback when something goes wrong or when an action succeeds so that I always know what the app is doing.	Feedback and error handling	To know what the app is doing	1	The system shows confirmation when an action succeeds	Given a user performs an action successfully	When the action is completed	Then the system shows a clear confirmation message indicating the action was successful
				2	The system shows an error message when something goes wrong	Given an error occurs during an action	When the user performs the action	Then the system shows a clear error message explaining what went wrong
US011	As a shop owner, I want to manage queue turns and timing so that I can organize my service better.	Manage queue turns and timing	To organize service efficiently	1	Queue turns can be advanced	In case the shop owner is managing an active queue	The shop owner selects the next customer	The system will advance the queue and update the current turn
				2	Customers can be removed	In case a customer leaves or needs to be removed	The shop owner removes the customer from the queue	The system will update the queue and adjust positions accordingly
US012	As a shop owner, I want to see daily stats about queues so that I can optimize operations.	See daily stats about queues	To optimize operations	1	The shop owner can see daily queue statistics	Given a shop owner opens the statistics section	When the daily statistics are loaded	Then the system displays the number of customers served, average waiting time, and peak queue times
				2	The shop owner can filter stats by day	Given a shop owner is viewing queue statistics	When the shop owner selects a specific day	Then the system displays the queue statistics for that selected day
US013	As a shop owner, I want to verify customer arrival so that the queue remains accurate.	Verify customer arrival	So that the queue remains accurate	1	The system removes customers who do not arrive	Given a customer does not arrive within the allowed time	When the shop owner marks the customer as not arrived	Then the system removes the customer from the queue

				2	The queue updates after arrival verification	Given the shop owner verifies a customer's arrival	When the verification is completed	Then the system updates the queue order automatically
US014	As a shop owner, I want to open/close my queue so that customers can only join when my stall is operating.	Open and close the queue	So that customers can only join when the stall is open	1	Queue opens correctly	Given the shop owner has a closed queue	When the shop (stall) opens	Then the customers can start joining the queue
				2	Queue closes correctly	Given the shop owner has an open queue	When the shop (stall) closes	Then the customers cannot join the queue anymore
US015	As a blind user, I want vibration notifications so that I know when it's my turn.	Vibration notifications	To know their turn	1	The system vibrates when it is the user's turn	Given a blind user is waiting in a queue	When it becomes the user's turn	Then the system sends a vibration notification
				2	The user can enable vibration notifications	Given a blind user is in the accessibility settings	When the user enables vibration notifications	Then the system saves the preference and activates vibration alerts
US016	As a user with visual impairment, I want the app to read out key information using text-to-speech so that I can use it without looking at the screen.	Text-to-speech support	To use the app without looking at the screen	1	The system reads key information using text-to-speech	Given a visually impaired user has text-to-speech enabled	When the user opens a screen with relevant information	Then the system reads out the key information aloud
				2	The user can enable text-to-speech	Given a user is in the accessibility settings	When the user activates text-to-speech	Then the system enables voice reading for key information
US017	As a user, I want an interactive map to see the distribution of the market	Interactive map	To see the distribution of the market	1	The system displays an interactive map	Given a user opens the map section	When the map loads	Then the system displays an interactive map of the market
				2	The user can interact with the map	Given a user is viewing the map	When the user zooms or moves the map	Then the system updates the map view accordingly
US018	As a market visitor, I want each shop to appear as a pin on the map so that I can quickly find where it is physically located.	Show shop location on map	To quickly find a given shop	1	Each shop is displayed as a pin on the map	Given a user is viewing the map	When the map finishes loading	Then the system displays each shop as a pin
				2	The system informs when no shops are available	Given there are no shops available	When the user opens the map	Then the system shows a message indicating no shops are available
US019	As a market visitor, I want to tap a shop pin on the map and see a quick summary of its queue so that I can decide whether to join without leaving the map (with a button to access the shop's main page)	Shop queue info pop-up and shop main page button	To join a queue without leaving the map	1	The system shows queue summary when tapping a pin	Given a user is viewing the map with shop pins	When the user taps on a shop pin	Then the system displays a summary with queue information
				2	The system provides access to the shop page	Given a user is viewing the queue summary	When the user presses the "View details" button	Then the system navigates to the shop's main page

US020	As a market visitor, I want to search for shops by name or category so that I can quickly find a specific stall without browsing the whole map.	Search shops and filter	To quickly find a specific shop	1	The system allows searching by name	Given a user is on the map or search screen	When the user enters a shop name	Then the system displays matching shops
				2	The system allows filtering by category	Given a user is browsing shops	When the user selects a category	Then the system displays shops that match the category
US021	As a market visitor, I want to tap on a shop and see its full detail page so that I can get all the relevant info before deciding to join the queue.	View shop detail page	To see all the shop's information before deciding to join its queue	1	The system shows the shop detail page	Given a user selects a shop	When the user taps on the shop	Then the system displays the shop detail page
				2	The detail page shows relevant information	Given a user is viewing a shop detail page	When the page loads	Then the system displays queue information, location, and basic shop details
US022	As a market visitor, I want to join a shop's queue directly from its detail page so that the discovery and reservation flow feels seamless	Join queue from shop page	So that the discovery and reservation flow feels seamless	1	The user can join the queue from the detail page	Given a user is on a shop detail page	When the user presses the "Join queue" button	Then the system assigns a position and confirms the booking
				2	The system handles errors when joining	Given the queue is unavailable or full	When the user tries to join	Then the system shows an error message
